

Save More on Gas. Weld Smarter With GasiQ – The Rapid Welding Guide

Discover the best-value regulator for demolition and salvage welding professionals

At Rapid Welding, we know that every penny – and every weld – counts. That’s why we proudly supply the GasiQ Optimator® range of regulators. Built for professionals in demanding industries like demolition and salvage, the Optimator® delivers proven savings, reliable performance, and long-term value that cheaper alternatives simply can’t match.

GasiQ Optimator® vs Cheaper Regulators

Feature	GasiQ Optimator® (via Rapid Welding)	Cheaper Alternatives
Gas Efficiency	Saves up to 43% gas per weld cycle	Significant gas lost on startup
Return on Investment	Pays for itself in under six months	Low cost upfront, high long-term spend
Environmental Benefit	Fewer gas deliveries equals lower emissions	Higher usage equals larger carbon footprint
Weld Consistency	Steady flow reduces weld porosity	Inconsistent start flow risks poor welds
Regulator Options	Cylinder, outlet point, integrated and lockable models	Basic range, limited precision
Credibility	Used globally by thousands	Often untested or uncertified
Real-World Example	Cut gas use from 838 litres to 429 litres in factory tests	No proven comparison data

Real Savings, Real Fast

If your team uses **around 5 tonnes of welding wire a year**, the Optimator® could save you over **£3,100 annually** – that’s more than just savings. That’s profit.

Why Buy from Rapid Welding?

We're proud to be a trusted partner of GasiQ and offer their full product range - that help professionals work smarter, safer and more cost-effectively

- ✓ Authorised GasiQ Distributor
- ✓ Friendly expert advice and customer support
- ✓ Quick delivery and reliable service
- ✓ Competitive pricing on genuine GasiQ equipment

Ready to upgrade your regulator?
